## Easy voice recorder apple

There are only two Voice-O-Graph recording booths left in the world. One is round at Jack White's house and the other is in Soho, London's Phonica Records only for the next two weeks. Voice-O-Graphs was a common place in American shopping malls and transport hubs and was also located in the UK. In Graham Green's Brighton Rock film adaptation, the original 1940s pinkie gangsta uses one to record a message to his wife about how much he hates her. Aah, isn't that nice? The machines are essentially a recording booth attached to a record-breaking lathe, so the recordings made in them could be immediately transferred to cardboard discs coated in six-inch diameter shellac. Yes, cardboard. This was not an audiophile product. Cabins were most commonly used to send voicemails to and from troops based abroad, for aspiring musicians to record songs, and presumably for drunks to record two minutes of themselves making fart noises and making funny voices. A timer ticked, with a spy indicating that there were only 30 seconds until the end of the assigned recording time, meaning many Voice-O-Graph recordings start with people talking rather slowly and then accelerating as they realize they've almost spent their fourth/shilling. Our list of the best USB turntables is here. Now, thanks to one of those strange links between big business and independent artists, Aberlour Whisky, part of the mammoth Pernod-Ricard conglomerate, has brought a Voice-O-Graph to London's celebrated independent electronic music vinyl specialist Phonica. Until November 2, you can see the box and, in fact, make your own registration in it. Musicians are invited to bring instruments, though tuba players may be unlucky, given the cozy size of the Voice-O-Graph. Here's how it works: you go to record yourself doing anything, after downing a wee dram of the 12-year-old Aberlour single malt. Your magnum opus/beautiful, romantic outpouring/drunk chaos is cut on a vinyl record (the machine has been updated). You listen to him back as you pull out a quizzical expression. The quizzical expression is actually mandatory, but Scotch is only on offer at the following times: 22-23 October and 29-30 from 17:00 to 19:00 and 24 and 31 October from 16:00 to 18:00. In any case, there is no charge. I saw the car in action on Monday, and the recordings it produces abandon the machine sounding as if they were recorded in the 1930s, by someone who had long since died. The timing and pace of the lathe-cut vinyl are absolutely everywhere, giving a spooky effect that's like intercepting a haunted transmission from the past. As long as you don't register by making fart noises and funny voices, anyway. The Voice-O-Graph passes to Canada after its stay in London. For more information visit Aberlour and Phonica. NEW YORK (TheStreet) - If there was any small concern for Apple (AAPL) - Get Report has trouble selling the iPhone 5s, it was completely unfounded. Early Monday Monday the company announced that iPhone 5 pre-orders exceeded 2 million in the first 24 hours the phone was available. The tech giant said demand has exceeded initial supply and while most pre-orders will arrive to customers on September 21, many are now scheduled for delivery in October. Phil Schiller, Apple's senior vice president of Worldwide Marketing, was ecstatic by the numbers. iPhone 5 pre-orders broke the previous record held by iPhone 4S and customers' response to the iPhone 5 was phenomenal, he explained, in a press release. iPhone 5 is the best iPhone ever, the most beautiful product we have ever made and we hope customers love it as much as we do. It is clear from the press release that the demand for the new iPhone is staggering, reaching unprecedented levels. AT&T (T) - Get Report said the iPhone 5 is the best-selling iPhone ever, while Verizon (VZ) - Get Report was experiencing issues on its website and with customer service. Some tech journalists, social media mavens and Wall Street analysts were not initially impressed with the device, saying it did not present anything new that was not already available on other smartphones. They were looking for Apple to wipe them out with a whole new design or revolutionary feature. The pre-order numbers of over 2 million during the first 24 hours of availability are staggering. Apple is wiping out its records with the release of the iPhone 5, prompting some Wall Street analysts to raise price targets. Keith Bachman, an analyst at BMO Capital Markets, raised his price target to \$750 from \$680 in his version of the new iPhone. Evaluate out-of-shape actions. Everyone knew that the iPhone 5 would be a huge launch. Now Apple has shown us how huge it is, and this is only in the first 24 hours. There is still a long time in 2012 for Apple to prove its opponents wrong. Interested in learning more about Apple? See TheStreet Ratings report card for Apple stock. - Written by Chris Cacciotti New York & Contact by Email Follow @Commodity\_Bull April 14, 2017 3 min read Susan Bennett, 68, has an iconic voice, but most people don't know her name. In an interview with Typeform, Bennett shared the story of how she became Siri's first voice, and how she handled the news when she found out. You should check out her interview, which includes audio clips and a breakdown of her interaction timeline. The 10 most interesting highlights are listed below... A different kind of voice performance, Bennett began his career as a classicist. She was a backup singer for Bert Bacharach and Roy Orbison in the 1960s and 1970s, and sang television and radio commercials. Today she and her husband are in a band and are singing together in Berlin in the name of "Siri". In the mid-1970s, when AT&T first approached people to test software, many of them had been engineers. So an advertising agency called Mullen asked Bennett to sing. She agreed. She got the job. Bennett told Typeform, "I was a singer in life before I got married. I'm in my 19th year of marriage." In the early 1990s, Bennett dubbed GPS and automated phone systems. If you checked your bank balance or made flight reservations on the phone then, you may have heard her voice. Meanwhile, ScanSoft merged with Nuance Communications, which later partnered with Apple. Provisional success. Between 2005 and 2011, Bennett worked with clients such as Coca-Cola, IBM, Ford, and Delta Airlines. 6. The surprise of his life. He didn't know he was Siri's voice until the feature was added to iPhone 4S devices on October 4, 2011. Engineers were able to take the incomprehensible phrases he recorded, cut them and train them throughout the English language. However, Bennett kept his identity hidden for two years, until a video from The Verge made people ask: 7. Where the credit is due. Since Bennett has never recorded the actual phrases Siri utters today, he is not responsible for any of the cutesy answers for which the voice assistant is famous. It's all about programmers. Bennett has received thousands of phone calls and emails from people who say they have formed an emotional relationship with Siri. In creating Siri's personality, engineers worked to make it more human than previous robotic-sounding voice interfaces, programmed saucy returns, and avoided making it too persistently useful to the point of annoying users. Related: How important is Siri's personality? 9. Sidestepped Apple not only never admitted that Bennett was the voice behind Siri, but never paid her beyond the hourly wage she received from ScanSoft in 2005. 10. Reputation without responsibility. iOS 7 software and all subsequent iOS systems do not feature Bennett's voice. I had the best of both worlds because I was the original and I can promote myself. Reputation without responsibility. iOS 7 software and all subsequent iOS systems do not feature Bennett's voice. I had the best of both worlds because I was the original and I can promote myself. Related: How important is Siri's personality? 9. Sidestepped Apple not only never admitted that Bennett was the voice behind Siri, but never paid her beyond the hourly wage she received from ScanSoft in 2005. 10. Reputation without responsibility. iOS 7 software and all subsequent iOS systems do not feature Bennett's voice. I had the best of both worlds because I was the original and I can promote myself.
